

Practice \#1: An automobile manufacturer claims that its latest model can "go from 0 to 90 " in 7.5 seconds. If the " 90 " refers to $90.0 \mathrm{~km} / \mathrm{h}$, calculate the automobile's acceleration (in $\mathrm{m} / \mathrm{s}^{2}$ ).

Practice \#2: In 1970, Don "Big Daddy" Garlits set what was then the world record for drag racing. He started at rest and accelerated at $16 \mathrm{~m} / \mathrm{s}^{2}$ for 6.5 seconds. What was Garlits's final speed?

Practice \#3: A child slides down a steep, snow covered hill with an acceleration of $2.82 \mathrm{~m} / \mathrm{s}^{2}$. If her initial speed was $0.00 \mathrm{~m} / \mathrm{s}$ and her final speed was $15.5 \mathrm{~m} / \mathrm{s}$, how long did it take her to travel from the top of the hill to the bottom?
